Dear Hiring Manager:

I am writing to express my keen interest in the Software Engineer Internship Opportunities for University Students. I am a meticulous and passionate Information Systems student at Northeastern University. I like applying theoretical knowledge and experimenting it by gaining insights from feedback. I also enjoy challenges by coming out of my comfort zone and learning new skills.

I just started my journey as a student and expecting to graduate in two years. I have dedicated myself in improving the technical skills needed for backend development especially in solving complex coding problems. I possess a solid base of programming languages like Java, C++, SQL, Python, C. I also have a strong familiarity with wide range of development tools, methodologies and applications including but not limited to Algorithms and Data Structures, Spring Boot, Hibernate, Git, Eclipse, NetBeans, Draw.io, IntelliJ, GitHub, Bitbucket, Jenkins, OpenShift, Jira, SharePoint, Microsoft Excel, Microsoft Word, SonarQube. I have two years of work experience as a backend developer at LTIMindtree, during which I had the opportunity to delve deep into backend development, further igniting my passion in this field. As a zealous developer, my primary responsibility involved participating in business calls to grasp new project requirements. Subsequently, I take on the task of designing an approach to address these requirements and then implement the chosen design with agility and perform end to end testing. Despite my status as a newcomer to the industry, I have had the privilege of working alongside highly experienced colleagues. My adeptness in active listening and my rapid learning ability have helped me to keep pace with their expertise. In fact, I've received repeated accolades for my capacity to multitask effectively by managing my time efficiently, and consistently delivering tasks on schedule which are often considered as a rare quality in someone of my experience as fresher.

I am drawn to the cutting-edge technology and real-world impact that software companies provide, and I am very much excited about the opportunity to be a part of it and having fun while solving. I believe my educational and practical experiences have equipped me to make a meaningful contribution to the projects at your company.

Thank you for considering my application. I welcome the opportunity to discuss about this position further. You can reach out to me at +18572069037 or snehayenduri@gmail.com.

Sincerely,
Sneha Yenduri
