Dear Hiring Manager,

I am writing to express my keen interest in the Software Engineer Opportunities for university students. I am a meticulous and passionate Information Systems student at Northeastern University. I like applying theoretical knowledge and experimenting by gaining insights from feedback. I also enjoy challenges by coming out of my comfort zone and learning new skills.

As a student, I have dedicated myself in improving the technical skills needed for backend development especially in solving complex coding problems. I possess a solid base of programming languages like Java, C++, SQL(MySQL, SQL Server), MongoDB, Python, C, Java Script, CSS, HTML5, jQuery, Bootstrap. I also have a strong familiarity with wide range of development tools, methodologies and frameworks including but not limited to Algorithms and Data Structures, Spring Boot, Hibernate, AngularJS, NodeJS, ReactJS, Git, Eclipse, NetBeans, Draw.io, IntelliJ, GitHub, Bitbucket, Jenkins, OpenShift, Jira, SharePoint, Microsoft Excel, Microsoft Word, SonarQube, etc. Through practical experience with Google Cloud Platform, Terraform(Infrastructure as Code), and Packer, Continuous Integration and Delivery (CI/CD), I have developed a robust understanding of cloud technologies and their real-world applications.

I have six months of work experience as a Software Engineer Intern at Oracle, during which I had the opportunity to build a full stack application using Python, MySQL, Fast API, Streamlit, Swagger Codegen which interacts with a machine learning model. I also have two years of work experience as a backend developer at LTIMindtree, during which I had the opportunity to delve deep into backend development, further igniting my passion in this field. As a zealous developer, my primary responsibility involved participating in business calls to grasp new project requirements. Subsequently, I take on the task of designing an approach to address these requirements and then implement the chosen design with agility and perform end to end testing. I have had the privilege of working alongside highly experienced colleagues. My adeptness in active listening and my rapid learning ability have helped me to keep pace with their expertise. In fact, I've received repeated accolades for my capacity to multitask effectively by managing my time efficiently. I consistently deliver tasks on schedule which is often considered as a rare quality in someone of my experience as fresher.

Thank you for considering my application. I am eager to contribute my skills and passion to such a forward-thinking organization. I believe my educational and practical experiences have equipped me to take up this role. I welcome the opportunity to discuss about this further. You can reach out to me at 857-206-9037 or snehayenduri@gmail.com.

Sincerely,
Sneha Yenduri.
