Dear Hiring Manager,

I am excited to apply for the Software Engineer position. I recently completed my M.S. in Information Systems at Northeastern University and bring 3+ years of experience building scalable backend systems, distributed applications, and AI-powered solutions across healthcare, cloud infrastructure, and financial services.

Currently, as a Research Software Engineer at the Children's Hospital of Philadelphia, I develop high-throughput Python systems for neuroimaging workflows, improving performance, reliability, and maintainability through large-scale system integrations. Previously at Oracle Cloud Infrastructure, I built a machine-learning-based log monitoring platform and pioneered an MCP-based LLM root cause analysis agent that accelerated incident investigation by 5× while reducing manual effort. Prior to that, at Citibank, I developed enterprise-scale financial applications using Java, Spring Boot, microservices, and SQL, improving processing efficiency and system stability.

My experience spans Python, Java, C++, FastAPI, Spring Boot, AWS, GCP, Terraform, Docker, and AI/LLM technologies including OpenAI APIs, LangChain, and MCP. I am passionate about building reliable, scalable software and would welcome the opportunity to contribute my technical expertise and problem-solving skills to your team.

Thank you for your time and consideration. I look forward to speaking with you.

Sincerely,
Sneha Yenduri
